BEFORE YOU BEGIN

NOTES

- Shut off the main water supply.
- Observe all local plumbing codes.
- Do not remove the faucet ground joints, as they contain important back-siphonage protection.
- Do not attach a dishwasher to the faucet spray outlet.
- Carefully inspect the waste and supply tubing for any sign of damage. Replace if necessary.

FOR NEW INSTALLATIONS

- Assemble the faucet and drain to the kitchen sink before installing the kitchen sink.

TOOLS AND MATERIALS REQUIRED

- Adjustable or open end wrench
- Thread sealant
- Tubing cutter
- Ratchet wrench with 7/16” deep socket
- Plumbers putty
- 5/64” Hex wrench

OPTIONAL TOOLS AND MATERIALS

- Pipe wrench
- Pliers
- Supply tubes
- Shut-off valves
- Trap
- Drain
- Screwdriver
FAUCET INSTALLATION

Unthread the hose from the hose connector.

Thread the mounting stud into the threaded hole at the bottom of the faucet body. The mounting stud should extend slightly beyond the threaded hole in the body.

INSTALL OPTIONAL ESCUTCHEON

NOTE: For installation on marble, do not use plumbers putty. Use the self-adhesive gaskets provided. Remove the paper backing and apply the gaskets (adhesive side down) over the outside holes.

For 1-hole installations: The escutcheon, spacer, and O-ring are not required. Slide the rubber washer over the faucet tubing and hose.

Insert the faucet tubing and hose into the hole.

For 3-hole installations: Apply a ring of plumbers putty to the underside of the escutcheon.

Insert the O-ring into the groove in the spacer.

Slide the rubber washer, escutcheon, and spacer (O-ring side down) over the faucet tubing and hose.

Insert the faucet tubing and hose into the center hole, carefully aligning the escutcheon. Press down on the escutcheon and remove any excess putty.

From the underside of the sink, position the bracket, washer, and nut onto the mounting stud. Position the faucet and escutcheon on the sink to obtain the desired alignment. Tighten the nut securing the faucet to the sink. Use a ratchet wrench with 7/16" deep socket for best access.

NOTE: The weight must be installed to act as a pull stop, and to prevent kinking damage to the hose.

For best performance, attach the weight to the hose 23" (58.4cm) from the loose end of the hose. The weight may be moved to adjust the pull-out length of the hose. Carefully tighten the weight screws. Do not overtighten.

Reconnect the hose to the hose connector.
SUPPLY CONNECTIONS

⚠️ CAUTION: Risk of restricted water flow and product damage. Use extreme care when bending the supply tubes to avoid kinking.

⚠️ CAUTION: Risk of back siphonage. Do not remove the ground joints from this faucet. The ground joints contain important back-siphonage protection.

Install the sink now, if necessary, using the sink manufacturer’s instructions.

Connect the supply tubes to the supply stops. (Left is hot – right is cold.) Tighten all connections.

INSTALLATION CHECKOUT

Check that all coupling nuts are tight.

Make sure the lever handle is in the down position.

Remove the sprayhead and screen from the end of the hose. Position the hose in the sink.

Turn on the main water supply, and open the valve for one minute to flush the fitting.

Reattach the spray and screen. Turn on the water and check for leaks. Repair as needed.

MAXIMUM WATER TEMPERATURE ADJUSTMENT

NOTE: Prior to adjustment, make sure the handle is in the maximum hot position.

Remove the handle and bonnet. Turn on the water to the maximum temperature by pushing the valve stem up, and turning it clockwise.

Mark the current position of the temperature stop tab (top edge) on the mounting nut with a marker or pencil. Lift the indexer and top disc just enough to clear the valve splines and to allow rotation.

NOTE: Each spline notch is an average 9.5° F (5.3° C) change in temperature.

Turn the indexer, top disc, and valve stem counterclockwise until the desired temperature is achieved. When the desired temperature is achieved, reinstall the indexer and top disc to the valve, making sure the top disc is snapped fully into the indexer.

Turn off the water by pulling the valve stem down. Reinstall the bonnet and handle.
CALL US FOR HELP

Questions? Problems? First review the installation instructions to ensure correct installation. For additional assistance, call our Customer Service Department for direct help. You may also contact us at our web site listed below.
